STATE OF CALIFORNIA

#### CALIFORNIA INTEGRATED WASTE MANAGEMENT BOARD

Base Year Modification Request Certification

Part 2: Generation Study - Includes Extrapolation of Residential or Non-Residential Diversion Data

To request a substitution for a previously approved base year used in calculating the diversion rate for your jurisdiction, please complete and sign this form and return it to your Office of Local Assistance (OLA) representative at the address below, along with any additional information requested by OLA staff. When all documentation has been received, your OLA representative will work with you to prepare for your appearance before the Board. If you have any questions about this process, please call (916) 341-6199 to reach your OLA representative.

Mail completed documents to:

California Integrated Waste Management Board Office of Local Assistance (MS - 25) 1001 I Street PO Box 4025 (mailing address) Sacramento, CA 95812-4025

#### General Instructions:

Please select the ONE choice below that best explains your request to the Board.

- Use a recent generation-based study to calculate our current reporting year generation amount, but not officially change our existing Board-approved base year.
- Use a recent generation-based study to officially change our existing Board-approved base year to a new base year.

The shaded cells on these sheets are protected. If you have problems using these sheets, please contact your Office of Local Assistance representative by calling (916) 341-6199

Section II: Information for New Generation-Ba	sed Study
Attach additional sheets if necessary-referen	nce each response to the appropriate cell number (e.g., "4").
Note: New base years must be representative of	a jurisdiction's disposal and diversion.
1. Current Board-approved existing base year:	2. Proposed new generation-based study year:
1990	2000
the second secon	or is representative of everage appual jurisdiction disposal and

3. Explain how the proposed generation study year is representative of average annual jurisdiction disposal and diversion:

The proposed generation study more accurately reflects the diversion activities and disposal reporting for the City. Disposal tonnage is obtained from the DRS except for the first quarter of 2000 from the SERRF facility which was not reported to the DRS. Activities handled by the franchised hauler are reported to the City which allows Redondo Beach to track and better manage diversion activities through the City. However, independent recycling and waste prevention activities practiced by businesses are not reported by the hauler, and thus, have been gathered for this study. This has also given the waste hauler an opportunity to provide support and technical assistance to businesses during contact. This partnership has existed since late 1996, and the calculated diversion rate from this study is consistent with the reported activities. The possibility for reduction in disposal is one issue to examine in the future. Currently, a sizeable portion of Torrance is located on City of Redondo Beach parcels. Therefore, a substantial amount of waste is incorrectly allocated to the City of Redondo Beach.

4. Enter diversion rate Information I Diversion rate calculated using existing base year	a.			Diversion rate calculated using new generation-based study	b.	37	%
For existing base year pounds/person/day based on generation	•	9		For new generation based study pounds/person/day based on generation			11
Non-Residenti Residential 50 % generation		50	%	Non-Re Residential 34 % generat			66 %
Population existing generation-based study		601	67	Population new generation-based st	udy		67,600

5. If there is an increase from 4a to 4b, please explain how the new diversion rate is consistent with your current diversion implementation efforts. If the proposed new generation tonnage results in an increase in your pounds/person/day, please explain how this is consistent with your current diversion implementation efforts and provide examples (e.g., change in jurisdiction's demographics).

Redondo Beach's waste is generated from a diverse population: both residential & commercial, large technical corporations to small beachside boutiques, small to large multi-family units, and tourist trade. The new diversion rate reflects the city's current diversion efforts which require the same amount of diversity. These include green waste and mixed recyclables curbside collection, multi-family recyclables collection, business sector waste reduction and recycling efforts, and other policies, ordinances, and outreach efforts. Diversion measurement systems for some programs are being further developed. The City conducted a detailed technical outreach and assistance waste auditing program to numerous businesses and uncovered significant amounts of diversion. Much of the business sector information was not completely reflected during the initial solid waste study in 1990, and other new diversion efforts have been implemented since that time. Exclusive franchise agreements with the contracted hauler also has helped to better track activities. The change in per capita generation is due to improved data collection and capture provided by this study and improved reporting by recyclers and the franchised hauler.

6. If the difference between the proposed diversion rates in 4a and 4b is greater than 5 percentage points, please explain the specific reasons for the difference. (For example: new/improved curbside diversion programs.)

The new diversion rate is consistent with current diversion implementation efforts including green waste and mixed recyclobles curbside collection, multi-family recyclobles collection, business sector waste reduction and recycling efforts, and other policies and incentives implemented since 1990. In addition, the improved reporting provided by the waste audits and haulers and recyclers has improved the diversion rate as well. The City is comprised of both a residential and business community, however ongoing remodeling and construction activities and related tonnage occurring in the residential sector and along with construction in the commercial sector, which has been growing steadily due to the good economy, are reported by the commercial haulers and under commercial tonnage. Therefore, there is a significant change in the non-residential generation tonnage between 1990 and now.

10. On a separate sheet of paper, "marked Attachment 10," provide the following information for each diversion program listed in Section 8 that was extrapolated from representative sampling. Note: Do not include non-respondents in extrapolation because there is no data from the non-respondents. Extrapolate from survey respondents.

## A. Describe sampling method, including:

- Type of sampling method (for either stratified or cluster sampling, provide detailed information on how strata and clusters were collected)
- Total number of samples included in the survey
- Number of non-respondents and respondents
- Total population
- Source for identifying population (e.g., city business licenses, commercial database, resident's addresses, etc)
- Relation of sample size to total population
- Survey data collection tool(s) and approaches
- Confidence level and margin of error for the sampled population
- Unusual outliers and exceptional anomalies describe in detail.

**Note**: Outliers (specific generators which fall significantly above or below others) should be removed from base amount prior to extrapolation)

# B. Describe the methods used to prevent double-counting between the surveys and the reported tonnages from haulers, recyclers, materials recycling facilities and composters.

## C. Describe extrapolation method, including:

- Basis of extrapolation
- Why this extrapolation method is appropriate
- Sources of information used for extrapolation, such as disposal or employment
- Include all calculations

Attachment 10
City of Redondo Beach
Extrapolation Methodology

#### A. Sampling Method

The City of Redondo Beach has had a franchise agreement with their waste hauler for over 6 years. Any business could be included in the survey since the franchise agreement included the non-residential sector. For the minimum sample number, the CIWMB ABI database (used to determine minimum sample number) utilized during the technical subcommittee meeting on the Diversion Study Guide provided the 90% confidence interval and 5% level of precision. The minimum sample number to meet the requirements of a statistically representative sample is 243 businesses.

Each year since 1998. EcoTelesis staff/personnel conducted on-site visits and this year all data were updated to reflect the data of a single year (2000). (After extrapolation, it was discovered that old surveys from 1998 were conducted, but since data sheets were in storage, they were not used for this study.)

The City of Redondo Beach contacted over 350 businesses, and collected data from 247 on-site completed surveys. The primary purpose of the surveys during the first phase was to develop information for new programs that can be focused on the commercial and industrial businesses in the City of Redondo Beach. The second phase focused more on getting the minimum sample number for the extrapolated study.

#### B. Methods used to prevent double counting

To prevent double counting, the regional diversion facilities for traditional recyclable materials (paper, plastic, OCC, etc.) were not quantified. The focus of the study was to obtain the information from the generator side, rather than the regional diversion facility side. This method is preferred because many regional diversion facilities do not know the jurisdictional source of the recyclables that they receive. Many of the end markets are unknown and experience from previous studies indicates difficulty identifying all of

## C. Extrapolation Method Description and Outlier Analysis

The extrapolation is based on employment-based statistical extrapolation methodology. After removal of the outliers (businesses with extraordinary diversion as defined below), a source reduction correlative factor for diversion, and a recycling correlative factor for diversion were developed from the on-site surveys by dividing the total diversion tons by the number of employees in the sample base. The correlative factors for diversion were developed separately for the large strata and the small strata after removal of the outliers for each type of diversion practice (recycling, source reduction and composting).

The outlier analysis method was reviewed with the CIWMB staff. The outlier analysis screening filter consisted of a two-part test. The first part is a mathematical test that identifies any individual business that has a "high" diversion correlative factor. This was accomplished mathematically by first calculating the simple average for each strata. Next the standard deviation was calculated. A threshold value that raises a "red flag" as potential for being an outlier was determined by adding the value of the simple average to twice the standard deviation value for each business surveyed. The correlative diversion factor for each business (and each respective diversion practice) was subtracted from the threshold value. If the answer resulted in a negative value, that particular business was subjected to the second part of the test, which consisted of

- 1) is this type of business unique in this city?
- 2) Is the diversion practice unique?

562 424 8139

3) is the diversion tonnage significantly from the diversion program abnormally larger than achieved by similar businesses of this type and size?

If the answer to all three subparts is no, then the individual business was not considered an outlier. If the answer to any single one of the subparts is "yes", the sample is considered an outlier and removed from the calculation of the extrapolative diversion correlative factor to prevent excessive diversion credit being given to the city. Once a sample is an outlier, the diversion from the business is only added to the final computed diversion from extrapolation diversion as an "actual sample" (that is, not included in the extrapolation). This insures that the diversion from the business is counted, but not extrapolated to give

The Excel spreadsheet files for extrapolation (showing the calculation formulas in each cell) have been provided to the CIWMB with the new base year certification request form.

#### D. Source of Business Listing / Sampling Population

A Thomas Brothers map book was used to determine the City limits. A Dunn and Bradstreet database from the University of California at Los Angeles Waste Management and Recycling Program, CIWMB/UCLA Interagency Research Program, was used to determine the total number of employees in order to define the 80% cut-off point between the Large Business Strata and the Small Business Strata. The number of businesses approached for on-site visits was approximately 350+. Site visits were conducted at 247+ businesses. According to the CIWMB ABI database, there are approximately 2391 businesses in Redondo Beach. Over 10.46 percent of the businesses in the City of Redondo Beach were visited.

#### E. Sampling Accuracy

The sampling plan statistical accuracy is based on Appendix K of the CIWMB April 2001 Diversion Study Guide. The number of samples meets the minimum requirements of 90 percent confidence Interval, with a plus or minus 5 percent precision level. The City of Redondo Beach's new base year study utilizes on-site data from 247 samples. The number of samples collected exceeds the minimum number of samples by 4 samples. (Source CIWMB: 2391 businesses in Redondo Beach.) The total number of employees in Redondo Beach is 42,880 according to the Employment Development Department (EDD)

- 11. For each restricted waste type (i.e., agricultural waste, inert solids (e.g., concrete, asphalt, dirt etc.) scrap metals, and white goods [PRC section 41781.2]) and associated program, please provide the following information:
- a. If the diversion program started on or after January 1, 1990, complete the following table.

  Note: program name refers to one specific diversion program for that waste type (e.g., "diversion conducted by city public waste department.)

Restricted Waste Type		Year Started	Tonnage
inert material	Franchised hauler accepts & recycles City C&D material (asphalt & concrete) at Transfer Station	1996?	1292
inert material	Chandlers' Pit Inerts Resale Program including RPV inerts (does not include land reclamation or ADC tonnages excluded by CIWMB July 2001 action). Part of South Bay Citles work group to increase C&D recycling in area.	1992	2088
scrap metals	Source Reduction & Recycling activities for metal at businesse	after 1990	see Attachment 98
pull down for waste types			
pull down for waste types			
pull down for waste types			

- b. If the diversion program started before January 1, 1990 and if documentation on the program and waste type has not been approved by the Board - on a separate sheet marked "Attachment 11b,"give the program and waste type, and provide documentation that indicates:
- How the diversion was the result of a local action taken by the jurisdiction, which specifically resulted in the diversion (PRC sec. 41781.2 [c] [1]).
- That the amount of that waste type diverted from the jurisdiction in 1990 was less than or equal to the amount of that waste type disposed at a permitted disposal facility by the jurisdiction in any year before 1990. Note: this criterion is applicable to the entire jurisdiction, not to individual programs (PRC sec. 41781.2 [c] [2]). Please include documentation.
- The jurisdiction is implementing, and will continue to implement, the diversion programs in its Source Reduction and Recycling Element.

Note: If documentation for a waste type and program has already been approved by the Board, you	do not
have to provide an attachment 11b for that waste type and program.	(Date)
If documentation is not available, go to 11d.	
c. If the diversion program started before January 1, 1990, and the documentation requested in 11b	is

lestricted Waste Type	Specific Program Name	New Base Year or Reporting Year Diversion Tonnage

d. If the diversion program started before January 1, 1990, and the documentation requested in 11b is not available, please complete the table below for each program claimed. *Note:* Only the difference between the new base year/reporting year and 1990 can be counted in the diversion rate calculation.
